Name- Priya Ranjan

Registration Number-25BCE10221

Branch- Computer Science Engineering (Core)

Year- 2025-2026

Course Title- Digital Literacy

Course Code- CSE0001

Date of Submission-31 March,2026

INTRODUCTION

In today's technology or advance growing digital world, it is very important for students to have excellent knowledge in digital literacy whether professionally or academically. It is important for students to keep up with the technology to succeed in both .As a Student Digital Ambassador, my role is to guide students in using digital tools effectively and with proper safety measures and maintaining a professional online presence .This project really helped me to understand digital tools better and helped me explore different aspects of digital literacy such as creating an infographic, building a digital portfolio, using online platforms , writing professional mails and understanding cybercrime. Each task really helped me to be better at tools and communication. The report summarizes what I have learned in all of the five modules and how digital literacy plays a crucial role in today's world.

TASK-01

For this task, I have created a digital literacy awareness infographic using Canva. The infographic is based on the given three topics namely understanding digital literacy and what it is, safe internet practices and maintaining a professional online presence. I have designed a visually appealing layout with icons, headings and short descriptions to make it easy to understand.

The infographic explains about how digital literacy has the ability to use digital tools effectively and responsibly. It also highlights safe internet practices such as using strong password (even suggesting some strong password) and avoiding suspicious links. Additionally, it also focuses on the importance of having a professional online presence, especially on Github and LinkedIn.

While making the infographic, I found it very interesting to use and explore Canva's templates and design tools. However, arranging the content in a clear and visually correct way was a biggest challenge for me. This task improved my creativity and helped me to present my information effectively. It also helped me present my information in a more descriptive way and put the information which are necessary for a better understanding.

TASK-02

For this task, I created my accounts on GitHub, LinkedIn and Kaggle to build my digital portfolio. GitHub is used for showcasing my coding projects and repositories. LinkedIn helps in creating a professional network with people and displaying your academic achievements and career success. On Kaggle, I will try to learn about various concept from their assigned courses and compete with other people to develop my skills and learn from them.

On GitHub, I have created a README that includes my name, branch and learning goals. On my LinkedIn account, I have updated my educational details, including which college, current degree and expected graduation year. These platforms will help me grow professionally and also tells me how to maintain a professional online presence.

Over the next four years, my plan is to create as many projects as possible and upload the good ones on my GitHub account and connect with professionals on LinkedIn and take them as a motivation to keep working hard. On Kaggle, I will try to participate in as many competitions and practice with real datasets and learn about python, machine learning and many more from that and learn from other people who have published their works. This will not only boost my confidence but will also help me getting good internships and jobs and improve my skills.

TASK-03

In this task, I have explored coding and collaborative platforms. I created an account on HackerRank and completed a beginner-level challenge, which really helped me to understand what a basic problem solving and coding logic is. It was a very good experience and it also boosted my confidence in coding.

For the second part, I have created a Google Form titled” DIGITAL LITERACY AWARENESS QUIZ” which included five multiple choice questions and short-answer questions. I have also viewed the responses in Google Sheets, which showed me how data is collected and analysed efficiently.

This task also helped me to understand how important online tools can be in academic. Platforms like HackerRank improve my coding skills and Google Forms are useful for surveys, quizzes for better understanding of topics. These tools are very helpful for better understanding of topics, assignments, group project and improving your skills throughout your academic time.

TASK-04

Poor digital communication can lead to misunderstandings and missed opportunities. This happens to us students a lot of time. We do not write proper subjects or clear message so the mails are ignored or not being responded. Even while writing emails and using informal language for professional or academic work it always gives a negative impression of yourself.

For example, a student sent an unclear and professional email to this professor saying “I cannot do the assignment today.” without no clear subject and explanation. This led to the professor not reading as it was unprofessional and losing him marks.

The situation could have been avoided by mentioning proper subject, writing in a formal way and explaining your reason. It would have made the situation clearer and make professor accept the request. Additionally, using polite language and a proper format and language will help build a positive impression. Digital communication is not just about conveying information but also about maintaining professionalism and respect. I gained knowledge about how to write proper email with proper format and tone and also improved my ability to communicate requests.

TASK-05

Cyber Crime is one of the increasing problems in the world. Everyone is facing cyber related crimes daily. While researching more about it, I found more people fall victim to scams like phishing and UPI fraud, even when we are aware of basic rules and what not to do.

Cybercriminals also use all kinds of tricks to make victims fall in their scam. They use psychological tactics such as urgency, fear, and trust to manipulate users to share their personal information. They have been so smart that they trick people to tell their OTP. Even now anonymous message comes that some people transferred money and they call saying we transferred extra making you return the extra money sent by mistake and you fall in their scam. Another surprisingly aspect is that how fast our money gets transferred and lost in online fraud cases, and you get nothing in return. The money is lost.

As a key factor I have learned performing this task, not opening links immediately. Verifying before opening it and if someone transfers money to my account not opening it quickly and being cautious with my words while speaking on phone. In case of urgent transfer, I would reach to my family or friends whether they are in need of money or not then transfer them. I will try avoiding sharing my personal details, OTP and emails and put two-security-authentication on my all apps. I will also update my privacy and security settings and will put passwords. This awareness will not only help me stay safe from online scams as well as others also.

CONCLUSION

This project has been an eye opener for me. It also tells us about positive and negative sides of digital literacy. Technology is expanding rapidly so is digital tools so it is very important to use them carefully.

This project helped me understand the importance of digital literacy in professional and academic life. I gained experience in creating digital content and how to present your important topics, creating an online presence on various apps where I post about my academic and professional success with collaborating with new people and learning from them. It also helped me how to use online tools, communicating professionally and in proper tone and about cybercrimes too.

Each task has helped me improve my skills and improve my digital communication skills. I also became more aware about cyber threats and how to stay away from them and even it helped me to understand how to write proper emails with format and language. Overall, this project was a valuable learning experience that helped me in my academic and professional career.
